David,

For general determination of disc type, please include 369/53.2 and everything indented under it. Since it has copy protection subject matter, I would concentrate my search on 369/53.21.

10/702509 seems to be cross-referenced to class 369, as there are claims pertaining to reading the physical track structure of a DVD. The invention determines whether a disc is recordable or read-only for copy protection purposes, based on factors such as (claim 3) the presence of a wobble on the track, (claim 4) the presence of a loop track, or (claims 5 and 6) the presence of information on the disc indicating what type (read-only vs. recordable) or standard (DVD-ROM vs. DVD+R, DVD-R). This looks like it goes in 369/275.2, 275.3, 275.4, or 277. I am not sure, however, about general determination of disc type.
